

# Divide and Rule

Intact Partitions features give a complete range of 100 % demountable and re-locatable Partitions, Doors, accessories etc. The design of INTACT Life partitions offers a total aesthetic freedom and endless possibilities to the space designer. Its unique concept based on compatible profiles matching the original structure ensures the technical integrity of the system in its most exclusive versions which gives the adequate choice to style the place modishly. Cherry Hill Interiors Pvt. Ltd. is the only company to get these products in India through their multiple projects.

## Crystal SG partition

The Crystal SG partition is a combination of glass and support without a metal internal structure. The profiles are minimised to enhance the clarity and transparency of the partition. The system is designed to be fully demountable and re-locatable with the thickness of 10mm or 12mm glass, connecting with a transparent plastic or poly carbonate profile and tracks are made up of aluminium mill finish with clipping top caps anodised or RAL painted. No silicon is used anywhere to install the system.

*INTACT Life, a Belgian-based company designs, develops and manufactures its own demountable and re-locatable office partitioning system which has had a global market for the past 30 years.*

*INTACT Life partitioning system provides to the designer a unique base for permanent innovation in space dividing solution with the insurance of technically sound characteristics. Whether for commercial, administrative, industrial work places or airport, schools or showrooms, its applications are infinite. In terms of services, INTACT Life provides the full sequence from project design, quantities calculation, manufacturing and supply of all components, with total logistics support till the work site, if required.*

## P or F type DG partition or DG Crystal partition

Crystal DG partition is double glazing system fully integrated partition system, designed as Intact 95 P or F type. The internal structure is made up of Galvanised steel in the shape of Letter S, which is provided with clip slots and conduit cut-outs.

Instead of the galvanised internal structure and 100% transparent plexi, glass fins also can be used to connect the glass, this allocates maximum transparency on our system. No silicon is used anywhere to install.

Tempered glass with a thickness of 4 to 8 mm is being used on either side. The flush system ensures maximum clarity without visible internal structure. Glass is being installed with a Clip on the internal structure and finished with a top aluminium cap. Profile finishes are either anodised or RAL powder coated.

Both the above system assures best acoustic support in the modern office environment.

## INTACT 95 SL

Intact 95 SL (slim line or pencil line) is 95mm thick solid wall partition system, aesthetic elegance is highly described with an enhanced acoustic support. The peculiar feature assures that no metal profile will be used externally to connect the panels and it can be installed with minimum 1mm and maximum of 3mm gap between the panels. The panels are being hanged on the galvanised internal structure with the help of a profile called gravity hung rack. All visible profiles can be either in anodised or RAL powder coated finish. It allows the freedom to use any kind solid panels ranging a thickness from 12 to 14mm.
